Title

The title of this week's unit will be “Storybird: Write a Problem.” This web unit is part of a larger four-week site entitled, “Creating Math Stories”

Description

This week's lesson will take 3rd to 8th grade students through a step-by-step guide on how to utilize Storybird.com in order to develop an interactive and engaging math problem narrative. The students will create their own Storybird account that can be reused after the completing of the course. Students will also learn how to use the available art to build a story. Upon the creating of a story, students will learn how to share it with others.

Objective

By the end of the lesson, students will be able to:

- Log-in and create at least one narrative using the web 2.0 tool, Storybird.com
- Using grade level math standards, students will develop a math problem using a narrative created in Storybird.com

Pre-Steps

Prior to the week's unit, trainees will need to have gone to Storybird.com and created a student account. Additionally, students will need to have their district approved grade level math curriculum. Students will then log into their accounts and proceed forward to begin the tutorial.
